

The Viviana straps extreme feature a unique hypoallergenic grip spread all over the fabric. This allows Viviana straps Extreme to keep your transmitter safe and in place during any talent's action and extreme scenes without undermining comfort.

The new hypoallergenic grip is impossible to remove and it preserves the most important features of the Viviana straps: breathability – slimness and softness.

Viviana Straps are the safest and most comfortable way to let talents wear your TX and they are made from an amazing slim, breathable and soft fabric made in Italy.

Each model has got ultra low profile velcro with an amazing grip and invisible overlap. Our double cable pouch lets you tuck in the cable very quickly so you won't waste time searching for it when rushing on the set.

The gauze fabric of the pocket is in contact with the skin, therefore sweat humidity won't reach the transmitter.

The double polyurethane thigh grip is completely hypoallergenic and runs through the whole strap giving you the best grip ever on the skin.

The label and the cut on the top of the back side help you to roll it up easily. The label on the back will create grip between the fabric when it's overlapped, so as to avoid the "tongue effect " that causes the fabric to lose grip and slip down on the body of the actors.

In the box you'll also find the strip to secure the transmitter pocket.

You can use all the main tx present in the market:

WISYCOM	mtp40, mtp40s, mtp41, lite
LECTROSONICS	SMDB, SMB, LT, LMB, UM400a, WM, SMV, SSM
